

# Cloud Network Engineer

(Infrastructure, Networking, Microsoft Azure, Cybersecurity)

Remote (CET +/- 2 hours), including equity

We are seeking a Cloud Network Engineer to join our exciting start-up, working within our DevOps Team, and playing a key role in building, delivering and supporting OutThink's ground-breaking SaaS (Software as a Service) Cybersecurity Human Risk Management Platform.

The platform provides innovative and just-in-time learning experiences, nudges, and simulations to hundreds of thousands of users around the world via both desktop and mobile devices. At the same time, the system monitors training responses, collects security system data and continually gathers feedback. All this data is collated and processed by our cloud engines in Azure, culminating in the provision of sophisticated predictive human risk management models. Our models can drive automated countermeasures, and present analysis results via the delivery of highly visual and interactive on-line dashboards.

## The Role

- Work with OutThink's customers, partners, and our own engineers to securely connect our platform to remote data sources, APIs, and customer's security systems.
- Help design secure network topologies, architectures, and services.
- Help ensure the availability and security of our cloud platform's network utilising security best-practices and proactive monitoring.
- Be a networking expert, who will strive to develop network solutions that are automated and use infrastructure as code to automate the delivery of cloud network and infrastructure components.
- Work closely with stakeholders to ensure that delivered systems are both technically sustainable, highly secure and meet business needs.
- Produce and continually update technical documentation and assist with customer queries and proposals.
- Use agile working practices with teams across engineering and with strategic partners to release enterprise class network and cloud services.
- Help to deploy and manage the Microsoft ecosystem across the organisation, including Defender, Sentinel and M365.
- Be an advocate and driving force behind the implementation of next generation networking, including Zero Trust.

## What You'll Need

- 5 + years minimum in an IT Infrastructure or Networking Engineering role, with at least 2 years working as a network specialist incorporating cloud or hybrid infrastructure.

- A widespread understanding of enterprise network solutions including firewalls, load balancers and virtual networks.
- Virtualisation technologies, for both Windows Server and Linux.
- Commercial experience with Azure AD and Microsoft security product deployments, such as Defender and Sentinel.
- Ability to work on both project and operational support.
- Good communication skills, with the ability to communicate in English in all forms

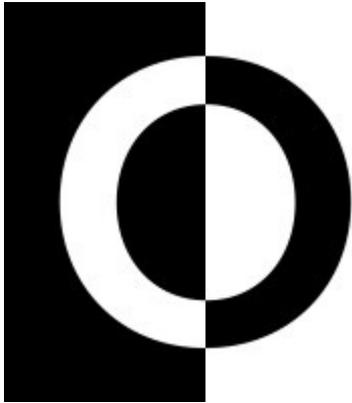

#### **Desirable**

- DevOps Tooling skillset, incorporating either Terraform or Azure Bicep.
- A good degree in Information Systems, Engineering, or another related technical field.
- Microsoft Azure networking experience, including (but not limited to) Virtual Networks, Web Application Firewall, Application Gateway and/or Azure Front Door.
- Training or certifications in Microsoft Azure, such as Azure Enterprise Administrator Expert or Azure Network Engineer Associate.
- Experience of deploying and managing Kubernetes clusters, in particular AKS. If you do not know k8s already, you will learn fast!
- Any AWS cloud network experience.
- Previous experience working in a cybersecurity company, or in a cyber-related field.

#### **In Return You Will Receive**

- An opportunity to put your ideas into practice and work with some of the most modern and leading-edge technologies available, to build and bring to market the world's first Cybersecurity Human Risk Management Platform.
- Great start-up culture in a fun, friendly, and hardworking team.
- Flexible remote working.
- Competitive salary and benefits package.
- Share options - a rare opportunity to get in early and have a significant stake in what could potentially be a unicorn start-up, with a huge financial payback.
- 34 days paid holiday (including public holidays).
- Plus, an extra day off on your birthday!

## About the company

OutThink is a young start-up using some of the latest technologies and methodologies to build the world's first truly predictive Human Risk Management Platform (SaaS).

We are building an innovative, disruptive solution, OutThink is the evolution of traditional security awareness training. Used by large, complex organisations around the world, the OutThink SaaS platform has been developed specifically to identify, measure human risk, and affect behaviour change.

OutThink is headquartered in the UK but has been a remote-first company since before the pandemic, with employees working from locations including Spain and the UK. We use the latest collaboration tools to ensure a productive working environment. We soon expect to be meeting up again in locations across Europe to socialise and for a much needed catch-up.
