

Product Owner

(Agile, Cybersecurity, User Experience, Data, ML)

Remote (CET +/- 2 hours), including equity

We are seeking a Product Owner to join our exciting start-up, working within a high performing agile engineering squad, and playing a key role in building and delivering OutThink's ground-breaking SaaS (Software as a Service) Cybersecurity Human Risk Management Platform.

The platform provides innovative and just-in-time learning experiences, nudges, and simulations to hundreds of thousands of users around the world via both desktop and mobile devices. At the same time, the system monitors training responses, collects security system data and continually gathers feedback. All this data is collated and processed by our cloud engines in Azure, culminating in the provision of sophisticated predictive human risk management models. Our models can drive automated countermeasures, and present analysis results via the delivery of highly visual and interactive on-line dashboards.

The Role

You will help to proactively drive the development of the platform with new features, innovative ideas, and powerful solutions.

You'll take ownership of your projects from day one. You'll work with the senior stakeholders to move things forward, shape processes and recommend the tools you need to do your best work.

You will be the product owner in a multi-disciplinary squad and will have the opportunity to work closely with executives, the customer success team, customers, and prospects.

This is a predominantly remote role in a remote team where open feedback, new ways of working, and thinking out of the box is not only encouraged but expected.

Responsibilities

- You will contribute to the product vision, roadmap, and program backlog. You will own your team's backlog and implementation.
- You'll work to align your team's delivery plans with wider integration plans across the organisation.
- Clarification and refinement of user stories and non-functional requirements with the development team.
- You will champion lean & agile practices, supporting your team as we continually look to improve flow.
- You will be primarily solution, technology, and team facing; however, you will be equally comfortable liaising with customers to verify requirements and ensure acceptance success and product quality.

What You'll Need

- 5+ years' experience as a successful technical product owner for a digital product (preferably SaaS) company, driving the agile development of a highly successful and technically challenging product.
- A good degree in a numerate or semi-numerate field, such as Engineering, Physics, Mathematics or Computer Science.
- Significant experience working in an Agile team as a Scrum Product Owner or Scrum Master.
- It's essential you're a self-starter and able to drive early concepts through to production.
- Excellent verbal and written communication skills and confident presenting your work and representing the team at all levels.
- Fluent in English.
- You'll be able to build consensus with stakeholders to ensure we deliver what our customers and the wider business needs.
- You'll have a breadth of product & technical knowledge to support an integrated delivery approach.
- Experience and a deep interest in new technology and innovation.
- Excellent interpersonal and communication skills: You're comfortable moderating client conversations and technical discussions in a team of skilled professionals, communicating goals, vision, and showcasing complex problems with a passion for finding pragmatic and smart solutions.
- Ability to learn new processes and concepts fast with a demonstrated sense of curiosity.
- Intrinsic drive and motivation to build a 'world first' and share our start-up vision.

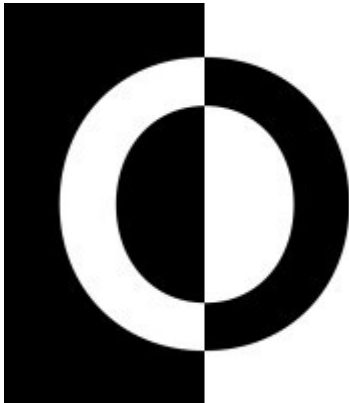

Desirable

- Cybersecurity experience.
- Working experience with JIRA.

In Return You Will Receive

- An opportunity to help build a new, highly sophisticated cloud-native platform.
- An opportunity to work with some of the most modern and leading-edge cloud-based technologies available, working closely with top experts in the industry.
- Great start-up culture in a fun, friendly, and hardworking team.
- Flexible remote working
- Competitive salary
- Share options package - a rare opportunity to get in early and have a stake in what could potentially be a unicorn start-up, with a huge financial payback.
- 34 days paid holiday (including public holidays).
- Plus, an extra day off on your birthday!

About the company

OutThink is a young start-up using some of the latest technologies and methodologies to build the world's first truly predictive Human Risk Management Platform (SaaS).

We are building an innovative, disruptive solution, OutThink is the evolution of traditional security awareness training. Used by large, complex organisations around the world, the OutThink SaaS platform has been developed specifically to identify, measure human risk, and affect behaviour change.

OutThink is headquartered in the UK but has been a remote-first company since before the pandemic, with employees working from locations including Spain, UK, Bulgaria, and United Arab Emirates. We use the latest collaboration tools to ensure a productive working environment.

We soon expect to be meeting up again in locations across Europe to socialise and for a much needed catch-up.
